PUMP-OUT PLUG

The Type T-2 On-Off Tool is a tubing seal receptacle allowing isolation of a lower zone using a wireline blanking plug. The tubing string can then be removed from the well. When re-run, the tubing string automatically re-engages to the stinger, and the blanking plug can be retrieved by wireline.

The T-2 runs above an ASI-X, VSI-XW or Permanent Packer with latch stinger.

Features:

- Blanking plug seats in top of stinger to prevent debris build-up
- Bonded seal allows disconnects and reconnects
- Right or left hand release
- Milling shoe allows rotation through debris
